

Aryan Singh

Full Stack Engineer

+91 8602879043 | ariansobdh@gmail.com | [in](#) LinkedIn | [🔗](#) GitHub | [</>](#) LeetCode

SUMMARY

Full-stack engineering student with hands-on experience building end-to-end web applications spanning REST APIs, relational databases, and modern JavaScript frontends. Comfortable owning a feature from schema design through UI, with practical experience in authentication, authorization, and multi-tenant systems. Strong Data Structures & Algorithms foundation from active LeetCode practice.

EDUCATION

OP Jindal University, Raigarh

Expected June 2027

B.Tech, Computer Science Engineering — CGPA: 7.8 / 10

- **Relevant Coursework:** Data Structures, Computer Networks, NLP, Computer Vision, Artificial Intelligence, Machine Learning, Deep Learning, Database Management, Operating Systems, Programming Language Principles.

PROJECTS

HireTrack — Full-Stack Applicant Tracking System (ATS) 🔗

May 2026 – July 2026

- *Tech Stack:* Java, Spring Boot, PostgreSQL, Flyway, React, Vite, JWT, Docker, Maven, JUnit, Mockito
- Designed and built a full-stack, multi-tenant applicant tracking system with 25+ REST endpoints across a Spring Boot API, PostgreSQL + Flyway migrations, JWT-based auth, RBAC, and organization-scoped data isolation for managing job postings, candidates, and interview pipelines.
- Built a React (Vite) frontend with a drag-and-drop Kanban board for candidate pipeline tracking, a hiring dashboard, and an Interviews module with many-to-many interviewer assignments and structured scorecards, backed by an activity log, cutting manual pipeline-tracking effort by an estimated 40%.
- Wrote 50+ unit/integration tests with JUnit and Mockito achieving over 80% backend code coverage, containerized PostgreSQL with Docker, and managed the build with Maven.
- Used Claude AI (Claude Code) as an AI pair-programming assistant for architecture planning, debugging, and implementing backend features, accelerating feature delivery against a structured project spec.

Face-Based Attendance System 🔗

Dec 2025 – Feb 2026

- *Tech Stack:* OpenCV, Tkinter, NumPy, Pandas, Pillow, Python-CSV, Pytest-Shutil
- Engineered a real-time facial recognition attendance pipeline using Haar cascades, automating tracking for 300+ students and reducing administrative overhead.
- Built modular pipelines for dataset collection, preprocessing, face detection, and live recognition, boosting identification accuracy by 15% and cutting processing time by 25%.
- Built a Tkinter GUI for non-technical staff to manage 120+ student attendance records, using CSV + Pandas for storage and retrieval in under 2 seconds, with recognition latency under 1 second per frame; validated modules with Pytest.

NGO Awareness Website — InAmigos Foundation 🔗

Apr 2026 – May 2026

- *Tech Stack:* HTML5, CSS3, Vanilla JavaScript
- Built a fully static, mobile-responsive single-page site for a real NGO across 10 sections using Flexbox/Grid across 3 breakpoints, achieving a 90+ Lighthouse performance score and sub-2-second page load time, with a live Razorpay donation gateway and a volunteer sign-up form.

Personal Portfolio Website — Full-Stack Web Application 🔗

Aug 2026 - Sep 2026

- *Tech Stack:* React, Vite, Java, Spring Boot, PostgreSQL, Flyway, Docker, Vercel, Render, Neon
- Rebuilt a static HTML portfolio as a full-stack application, replacing hardcoded content with a React (Vite) frontend served by a Spring Boot REST API across 4 endpoints (/api/projects, /api/skills, /api/certifications, /api/contact).
- Modeled and versioned the PostgreSQL schema with Flyway migrations, decoupling content updates (projects, skills, certifications) from frontend code changes.
- Containerized PostgreSQL and the backend with Docker Compose, cutting local environment setup to 2 commands, and deployed the stack across 3 free-tier platforms (Neon, Render, Vercel) with a documented CORS and deployment guide.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, SQL, JavaScript

Backend & APIs: Spring Boot, REST APIs, JWT Auth, RBAC, Flyway

Frontend: React, Vite, HTML5, CSS3, JavaScript

Databases: PostgreSQL, SQL, MySQL

Tools & DevOps: Git, GitHub, Docker, Maven, VS Code

Testing: JUnit, Mockito, Pytest

CS Concepts: Data Structures, Algorithms, OOP, System Design basics, Complexity Analysis

INTERNSHIP, WORKSHOPS & CERTIFICATIONS

- InAmigos Internship — internship certificate appreciation certificate
- Participated in AI & Machine Learning and software development workshops covering practical implementation, emerging technologies, and industry tools (Jan–Feb 2026).
- Completed self-learning modules in Data Structures & Algorithms and Web Development; regularly practices algorithmic challenges on LeetCode.
- IBM Web Development — Certificate
- Introduction to IoT — NPTEL certification
